

APOORVA GANGA M S

Bengaluru | msapoorvaganga@gmail.com | github.com/ApoorvaGanga13

EDUCATION

Dayananda Sagar Academy of Technology and Management, B.E in AIML

Sep 2023 – 2027

- CGPA: 9.37/10
- 10th Grade: 90% (2020), 12th Grade: 86.66% in PCMB (2023)
- Coursework: Data Structures, Algorithms, Database Management Systems, Operating Systems, Computer Networks, OOPs in Java, Machine Learning

INTERNSHIP EXPERIENCE

AI Intern, SMAP Technologies

16 Sep 2025 – 22 Nov 2025

- Designed and deployed an AI-powered camera system that automatically marks attendance using real-time face detection and recognition, reducing manual entry effort by 80%.
- Integrated multiple RTSP/ONVIF camera streams for automatic attendance capture and timestamp logging.
- Developed and optimized facial-similarity algorithms achieving 95% recognition accuracy in live environments.
- Ensured system scalability and reliable recognition under varied lighting and PPE conditions.
- **Tools Used:** Python, OpenCV, TensorFlow/PyTorch, RTSP/ONVIF, SQL, RESTful APIs

TECHNICAL SKILLS

Programming Languages: Python, Java, C, SQL

Frameworks & Libraries: MERN Stack (MongoDB, Express.js, React.js, Node.js), FastAPI, Pandas, NumPy, pytest

LLM/AI: Gemini API (tool calling), Hugging Face Transformers, OpenCV, TensorFlow/PyTorch

Databases: MySQL, MongoDB

DevOps/Cloud: Git, GitHub, GitHub Actions, Docker, Kibana, Prometheus

Other Tools: VS Code, IntelliJ IDEA, Jupyter Notebook, Flask

PROJECTS

issue-agent: Coding Agent with Hidden-Test Evaluation

[Demo](#) | [Code](#)

- Built a tool-calling coding agent from scratch (Gemini API, no frameworks) that reads a bug report, edits a repository, and verifies fixes by running tests in a Docker sandbox (no network, read-only mount, resource limits).
- Designed an evaluation harness with hidden tests, overfit detection, test-tampering checks, and repeated runs; a prompt change raised the hidden-test solve rate on 10 held-out tasks from 76% to 100% (small pilot benchmark).
- Found and removed prompt leakage from my own experiment, and traced failures to specific root causes.
- Added unit tests, GitHub Actions CI, and a FastAPI web interface with a public replay demo.
- **Tools Used:** Python, Gemini API, FastAPI, Docker, pytest, GitHub Actions

Movie Recommendation System

- Designed a hybrid recommender system using content-based and collaborative filtering to predict user preferences.
- Implemented cosine similarity for feature matching and scikit-learn pipelines for efficient preprocessing.
- **Tools Used:** Python, scikit-learn, Pandas, NumPy, Streamlit

AI Based Mustering Event System

- Developed an AI-powered system to automate mustering and attendance tracking during large-scale events.
- Implemented face recognition and clustering algorithms to identify and verify participants in real time.
- Designed scalable data logging and reporting modules to handle dynamic crowd sizes efficiently.
- **Tools Used:** Python, OpenCV, TensorFlow/Keras, Flask, MySQL

ChatBot using Hugging Face Transformers

- Developed an interactive chatbot leveraging Hugging Face APIs for NLP-based conversations, trained with custom data to respond contextually to user queries.
- Integrated with a simple web interface for real-time use.
- **Tools Used:** Python, Hugging Face, Flask, VS Code

ACHIEVEMENTS

- Qualified for Round 2 at Vuencode Hackathon 2025 by Mantra Softech India.
- Member of the AI Club, DSATM, actively engaging in workshops and internal hackathons.
- Coordinator and Host of Future Labs 2025, a college-level AI and Innovation showcase event organized at DSATM.
